PROJECT PRESENTATION

NextGen Technology

Innovate Today, Create Tomorrow

A responsive frontend website built with React JS and CSS

Presented by: Renuka Yenuganti

2026

Project Overview

A quick introduction to the NextGen Technology website

WHAT IS THE PROJECT?

NextGen Technology is a frontend website that introduces visitors to modern digital technologies.

It brings important technology topics together in a simple, attractive and easy-to-navigate design.

4 Technology areas

REACT JS + CSS

Frontend development technologies used to create the interface.

Project Objectives

What this project aims to achieve

01 Modern design

Create an attractive and clear website interface.

02 Frontend skills

Practise React JS, JavaScript and CSS.

03 Clear structure

Organise information into meaningful sections.

04 Responsive layout

Support different screen sizes and devices.

Technologies & Tools

The tools used to build and style the website

HTML

Defines the structure and content of the webpage.

CSS

Controls colours, spacing, layout and responsiveness.

JavaScript

Supports website behaviour and interactions.

React JS

Builds the interface with reusable components.

VS Code

Editor used to write and manage the project code.

Main Website Sections

Four sections make the website simple to explore

01	HOME	Displays the title, welcome message, tagline and Explore More link.
02	ABOUT US	Introduces the purpose and focus of NextGen Technology.
03	SERVICES	Shows four technology categories using information cards.
04	CONTACT	Provides a Contact Us link that opens an email application.

Technology Areas

The four topics highlighted in the Services section

01 💻 **Web Development**

Creating modern and responsive websites.

02 🤖 **Artificial Intelligence**

Exploring smart systems and AI applications.

03 📱 **Mobile Technology**

Learning about mobile apps and devices.

04 ☁ **Cloud Computing**

Understanding online storage and cloud services.

How the Website Works

A simple user journey through the website

1

Open

User opens the website.

2

Navigate

Navigation links move to each section.

3

Explore

Technology cards show short descriptions.

4

Contact

Contact Us opens an email link.

Project Advantages

Why this frontend project is useful

- Simple and user-friendly design.
- Responsive layout for mobile and desktop screens.
- Easy to understand, update and maintain.
- Introduces important modern technology topics.
- Can be extended with more pages and features.

Future Enhancements

Possible improvements for the next version

LOGIN	Add user registration and login.
LEARNING	Include online courses and tutorials.
SEARCH	Add search and interactive learning features.
DATABASE	Connect a backend and database to store user details.

Conclusion

What we learned from the project

NextGen Technology demonstrates how React JS, HTML, CSS and JavaScript can be combined to create a modern frontend website.

The project helped us practise webpage structure, styling, navigation and responsive design. It also provides a foundation for adding interactive features in the future.

NEXTGEN TECHNOLOGY

THANK YOU!

Thank you for your time and attention.
